## FLORIDA: ORAL HEALTH FACT SHEET<sup>1</sup>

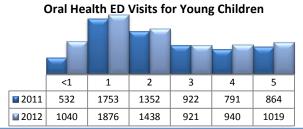

## HOSPITAL EMERGENCY DEPARTMENT USE FOR PREVENTABLE DENTAL CONDITIONS: 2011 & 2012

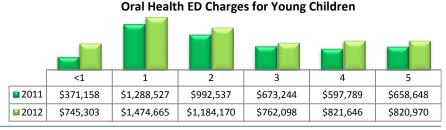

Ambulatory Care Sensitive oral health conditions (ACS) are those considered largely avoidable with adequate prevention and primary care. The use of hospital emergency rooms - among the most expensive form of medical care - for the treatment of ACS conditions may indicate lack of access to primary dental care. Among the reasons Floridians do not receive regular preventive care include lack of dental coverage for adult Medicaid patients, lack of private-practice dentists willing to accept Medicaid's low payment rates, lack of county health department resources, lack of affordable dental insurance or inability to meet high co-pays, and lack of awareness of the importance of dental health to overall health.

Floridians absorb the cost Medicaid and uninsured ER dental visits in several ways including higher health insurance premiums and healthcare costs, increased tax dollars needed to fund the state Medicaid program, increased local tax dollars to support local public hospitals, and lost productivity.

Indicators to consider in shaping policies to increase the overall health of Floridians while decreasing costs to the state's healthcare system:

**Policy Indicators** 

- High numbers of Medicaid patients visiting the ER for ACS dental problems suggest lack of access to dentists or oral healthcare clinics accepting Medicaid for both preventative care and for treatment.
- ER visits during the regular work day and traditional business hours, combined with ACS diagnoses, suggest visits are in lieu of a clinic or dental
- Rates of adult tooth decay are higher in older adults yet younger patients - those aged 20 to 34 years - comprise the largest segment of ER visits, suggesting that lack of dental insurance or an inability to meet high copays is driving such visits.
