Meeting Results:
By the end of the meeting the CRT will:
- Review/discuss Stress and Anxiety During COVID 19 educational presentation
- Review the case collectively during the FIMR Abstractor team presentation
- Following the review, deliberate collectively on the contributing factors, strengths and suggestions
- Collectively determine if the death was preventable
- Formulate recommendations to be shared with the Community Action Group (CAG)

Collective Case Deliberation/Review Notes

Case #37:

Significant Issues/Present and Contributing Factors:

1. Preconception/Medical History of Mother
   - Single parent
   - Late entry to prenatal care
   - Hx of Depression
   - Hx of Anemia, Preeclampsia
   - Chronic hypertension
   - Diabetes type I
   - Not back sleep position
   - Soft blanket
   - Blanket covering infant’s head
   - Multiple providers
   - Financial concerns (trouble paying bills)
   - Unintended/unwanted pregnancy
   - Caregiver under the influence (cocaine & THC)
   - No running water; unkempt home
   - Paramour under the influence at time of death

2. Medical: Fetal/Infant
   - Missing left kidney
   - Prematurity

Strengths:

   - Paramour involvement
   - Medicaid
   - Employed
   - Engaged in social services
   - Breastfeeding
   - Immunization up to date
   - Good support system
   - Referral to perinatology
   - Attended postpartum visit
   - Weight counseling discussed during pregnancy

Gaps in Service Delivery or Community Resource Systems:
Mom was encouraged to participate in parenting classes, she did not receive a referral or linked to services.

Recommendations:

- Conduct follow-up with patient after baby is discharged from NICU to ensure families are linked to needed services. This would provide an opportunity to discuss child development, infant safe sleep practice, referrals and other touchpoints.
- Provide comprehensive support/follow-up with patients with a history of mental health issues to ensure linkage to appropriate services.
- Provide comprehensive infant safe sleep education to all caregiver and gage understanding of education.
- Engage/include fathers/paramour when planning and providing maternal child health services.
- Offer flexible home visit appointments to encourage fathers/paramour and other care takers to participate in services/educational sessions.

Was this death preventable? Preventable
